EasyPact TVS

Catalog 2017

Motor starters from 6 to 630A

www.schneider-electric.com

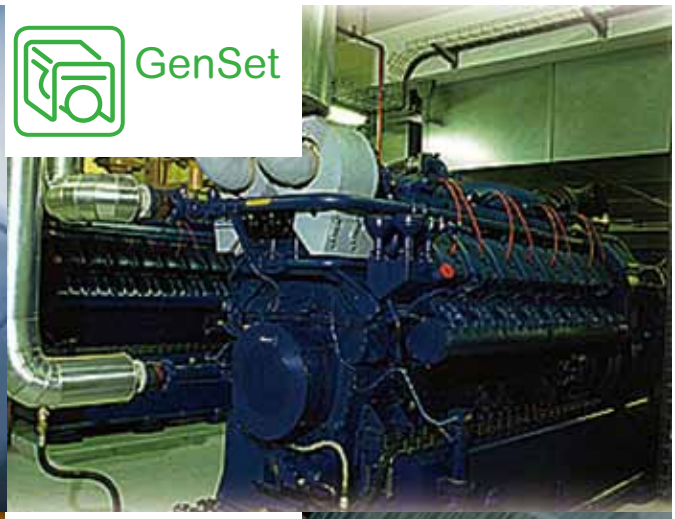
Life Is On | Schneider Electric

90 years of leadership in motor starter technology

EasyPact TVS provide you **Essential** control & protection for your applications:

HVAC

GenSet



Pumps

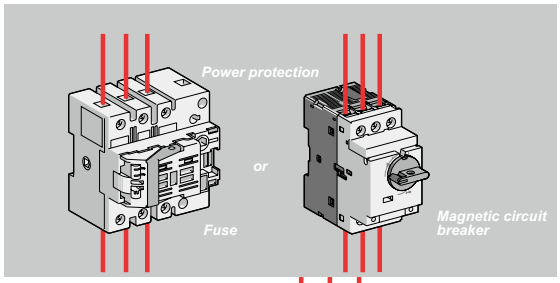
Textile

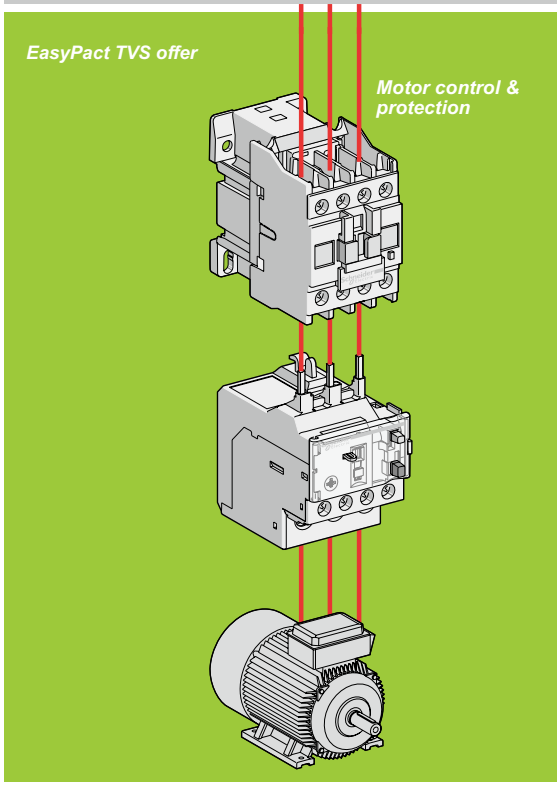
Material Handling

Packaging

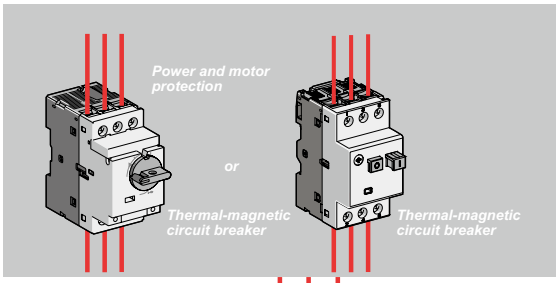
2 principles to build your starter solution

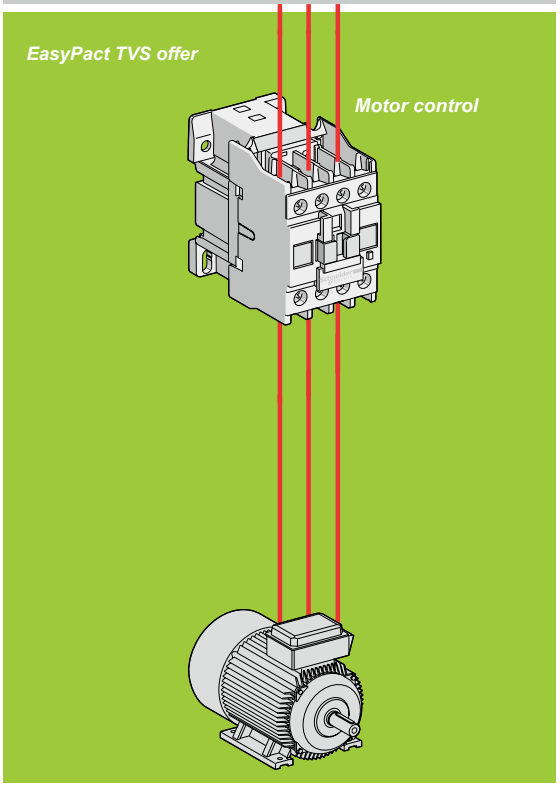
3-components solution
(Magnetic circuit breaker or fuse + Contactor + TOR)





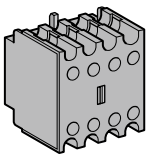
2-components solution
(Thermal-magnetic circuit breaker + Contactor)

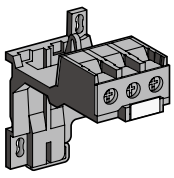




To build the essential solutions in an easy and simple way

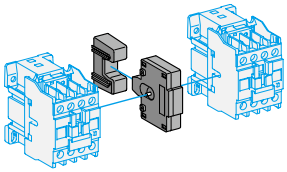
Control

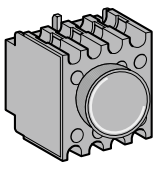




Terminal block

Reversor starter





Star-Delta solution

Designed for the essential

> Easy choice for simple applications

General contents

EasyPact TVS

CPB100417

CPB100430

> EasyPact TVS contactors, 6 A to 630 A

CPB100434

> EasyPact TVS thermal overload relays 0.1 A to 630 A

CPB100425

> EasyPact TVS control relays 4 NO/NC contacts

CPB100407

> EasyPact TVS motor protection circuit breaker 0.1A to 32A

> Coordination between protection and control components

> Glossary, definitions, technical information

Control your motors, Do It Yourself simply your solution: direct-on-line starter, reversing starter, star-delta starter

Footprint for complete compatibility with contactors (direct mounting under contactors)

Pilot your control circuits

Better continuity of service

EasyPact TVS 3-pole contactors

Size		1					2		3		
Rated operational current AC-3	**A**	6	9	12	18	25	32	38	40	50	65
Rated operational current AC-1	**A**	20	25		32	36	50		60	70	80
Rated operational power in AC-3	**220/230 V**	1.1	2.2	3	4	5.5	7.5	9	11	15	18.5
	380/400 V	2.2	4	5.5	7.5	11	15	18.5	18.5	22	30

Coil voltage code for 3-pole contactors

		24	48	110	220	230	240	380	415	440
LC1E06-300	50 Hz	B5	E5	F5	M5	-	U5	Q5	N5	R5
	60 Hz	B6	-	F6	M6	-	-	Q6	-	R6
LC1E06-95	50/60Hz	B7	E7	F7	M7	P7	-	Q7	-	-
LC1E400-630	50/60Hz	-	E7	F7	M7	-	U7	Q7	N7	-

Contactor: how to determine the full commercial reference ?

Example:

LC1E	12	10	U	5		**ref. LC1E1210U5**
					5	50 Hz
					Coil voltage code	240 V
					Auxiliary contact configuration (2)	01 1NC 10 1NO
					Rated operation current AC3	12 A
					Contactor	EasyPact TVS

Example 1: you need a 32 A contactor, 1 NC auxiliary contact, 24 V - 50 Hz coil ⇨ **LC1E3201B5**

Example 2: you need a 120 A contactor, 1 NC + NO auxiliary contact, 220 V - 50 Hz coil ⇨ **LC1E120M5**

(2) Example up to LC1E38 For details, please consult page A-3.

LC1E80	LC1E95	LC1E120	LC1E160	LC1E200	LC1E250	LC1E300	LC1E400	LC1E500	LC1E630

Common characteristics

> Contactors compatible with:

LAEN● auxiliary contact blocks
(see page A-20)

LAETSD time delay auxiliary contact (from 25 A contactor)
(see page A-20)

LAERC●● RC switch suppressor (up to 95 A)
(see page A-19)

LAEM● mechanical interlock
(see page A-19)

LAEP● set of power connections (up to 95 A)
(see page A-19)

Utilisation categories

> Class AC-1: AC loads with cos φ at least equal to 0.95 (resistive load, heating, distribution, etc.).

> Class AC-3: squirrel-cage motors with breaking taking place with the motor running.

(3) Color change for 120-630A contactors would come later, please consult your local Schneider Electric office.

Commercial reference numbering system

Frequency	Code
50 Hz	5
60 Hz	6
50/60 Hz	7

Coil voltage (1)	Code
24 V	B
48 V	E
110 V	F
220 V	M
230 V	P
240 V	U
380 V	Q
400 V	V
415 V	N
440 V	R

(1) For 3-pole contactors, please refer to page A-1.
For 4-pole contactors, please refer to page A-4.

Rated operation current (AC3)	Auxiliary contact configuration	Code
EasyPact TVS 3-pole		
06...38	1NO (or 1 NC)	10 (or 01)
40...160	1NO+1NC	none
200...630	no auxiliary contact	none
Rated operation current (AC3)	**Main contact**	**Code**
EasyPact TVS 4-pole		
06...95	4 NO	004
06...95	2 NO + 2 NC	008

Rated operation current (AC3)	Code

Coil voltage code for 4-pole contactors

		24	48	110	220	230	240	380	400	415
LC1E06-95	50/60Hz	B7	E7	F7	M7	P7	U7	Q7	V7	N7

Common characteristics

> Contactors compatible with:

LAEN● auxiliary contact blocks (see page A-20)

LAETSD time delay auxiliary contact (from 25 A contactor) (see page A-20)

LAERC●● RC switch suppressor (up to 95 A) (see page A-19)

Contactor: how to determine the full commercial reference ?

Example:

LC1E | 12 | 004 | B | 7

	ref. LC1E12004B7
7	50/60Hz
Coil voltage code	24V
Main Contact	004 4NO 008 2NO+2NC
Rated operation current AC3	12 A
Contactor	EasyPact TVS

Example 1: you need a 32 A contactor, 4 NO contact, 24 V - 50/60Hz coil ⇨ **LC1E32004B7**

Example 2: you need a 95A contactor, 2NO+2NC contact, 220 V - 50/60Hz coil ⇨ **LC1E95008M7**

EasyPact TVS 3-pole contactors
6 to 630 A
Power characteristics

Power circuit connections

Contactor type				LC1E06	LC1E09	LC1E12	LC1E18
Number of poles				3			
Rated operational current (Ie) (Ue ≤ 440 V)		In AC-3 (θ ≤ 55 °C)	A	6	9	12	18
		In AC-3 (θ ≤ 55 °C)					
		In AC-1 (θ ≤ 55 °C)		20	25		32
		In AC-1 (θ ≤ 40 °C)		–			
Rated operational voltage (Ue)		Up to	V	690			
Frequency limits		Of the operational current	Hz	50 or 60			
Conventional thermal current (Ith)		θ ≤ 55 °C	A	20	25		32
		θ ≤ 40 °C		–			
Rated breaking capacity at 440 V		Conforming to IEC 60947	A	48	72	96	144
Rated making capacity at 440 V		Conforming to IEC 60947-4-1	A	60	90	120	180
Permissible short time rating No current flowing for preceding 15 minutes with θ ≤ 40 °C		10 s	A	80	105		145
		1 min		45	61		84
		10 min		20	30		40
Maximum permissive current No current flowing for previous 60 minutes, at θ ≤ 40 °C		For 10 s	A	–			
Protection by fuses against short-circuits (U ≤ 690 V)	Without thermal overload relay gG fuse	Type 1	A	12	20	25	35
	With thermal overload relay			For corresponding aM or gG fuse ratings corresponding to the associated LRE● thermal overload relay, please see page B-3			
Average impedance per pole		At Ith and 50 Hz	mΩ	2.5			
Power dissipation per pole for the above operational currents		AC-3	W	0.09	0.20	0.36	0.81
		AC-1		1.0	1.6		2.6
Electrical durability		AC-3 (Ue ≤ 440 V)	Million cycles	1.4			1.2
		AC-1 (Ue ≤ 440 V)		0.15		0.3	
Mechanical durability				10

EasyPact TVS 3-pole contactors
6 to 630 A

Environment

Contactor type				LC1E06...E18	LC1E25...E38
Rated insulation voltage (Ui)		Conforming to IEC 60947-4-1, overvoltage category III, degree of pollution: 3	V	690	
Rated impulse withstand voltage (Uimp)		Conforming to IEC 60947	kV	6	
Conforming to standards				IEC 60947-4-1, IEC 60947-5-1	
Product certifications				EAC, CE	
Degree of protection (front face only)		Conforming to IEC 60529		Protection against direct finger contact IP2X	
Protective treatment		Conforming to IEC 60068-2-30		IEC60068-2-30 Test Db, Variant 2	
Ambiant air temperature around the device		Storage	°C	-60...+80	
		Operation		-5...+55	
		Permissible at UC (1)		-20...+70	
Maximum operating altitude		Without derating	m	3000	
Operating positions		Without derating		±30° in relation to normal vertical mounting plane 	
Flame resistance		Conforming to IEC 60695-2-1	°C	850	
Shock resistance (2)		Contactor open		7 gn	6 gn
1/2 sinewave = 11 ms		Contactor closed		10 gn	
Vibration resistance (2)		Contactor open		1.5 gn	
5...300 Hz		Contactor closed		3 gn	

(1) Derating see page E-4.
(2) Without change of contact states, in the most unfavorable direction (coil energised at Ue).

Installation recommandations

Avoid fire, product damage or power loss with a safe enclosure

Severe conditions such as dust, humidity, high temperature can result in people or equipments exposed to serious risks if the suitable protection of the electrical components is not taken.

Spacial CRN steel enclosures is one of our solutions
A complete offer with 39 dimensions from 200 x 200 x 150 mm to 1000 x 800 x 300 mm:
- with plain door, without plain mounting plate
- with plain door and plain mounting plate
- with glazed door, without plain mounting plate.

- Degree of protection IP 66.
- Compliance with standard IEC 62208.
- A wide range of accessories to fit to all your applications.

Spacial CRN, suitable for any application
Indoors with harsh and dirty environments like machines, manufacturing plants, and logistic centers.

Specific optional devices re-enforce the protection: fans, filters.

RC surge suppressor

■ Effective protection for circuits highly sensitive to "high frequency" interference and transcient generated when the contactor coil is switched off. For use only in cases where the voltage is virtually sinusoidal, i.e. less than 5 % total harmonic distortion.
■ Voltage limited to 3 Uc max. and oscillating frequency limited to 400 Hz max.
■ Slight increase in drop-out time (1.2 to 2 times the normal time).

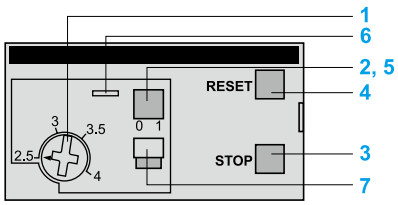
EasyPact TVS thermal overload relays

Presentation

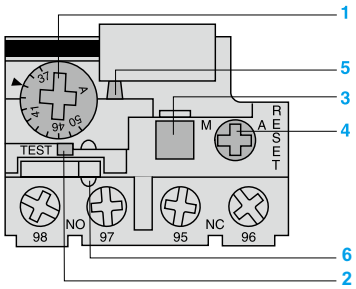
EasyPact TVS thermal overload relays are designed to protect a.c. circuits and motors against:
- overloads
- phase failure
- Long starting time
- prolonged stalled rotor condition.

The thermal relay controls permanently the current driven by the motor. When this current exceeds the setting it's auxiliary contacts will change state, causing the motor to stop.

Description



LRE●●, LRE48●



LRE3●●

1 Adjustment dial Ir.
2 Test button.
Operation of the Test button allows:
- checking of control circuit wiring,
- simulation of relay tripping (actuates both the N/O and N/C contacts).
3 Stop button. Actuates the N/C contact; does not affect the N/O contact.
4 Reset button.
5 Trip indicator.
6 Setting locked by sealing the cover.
7 Selector for manual or automatic reset.

LRE relays are supplied with the selector in the manual position, protected by a cover.
Deliberate action is required to move it to the automatic position.

Coil suppressor modules

RC suppressor

■ Effective protection for circuits highly sensitive to "high frequency" interference and transcient generates when the contactor coil is switched off. For use only in cases where the voltage is virtually sinusoidal, i.e. less than 5 % total harmonic distortion.
■ Voltage limited to 3 Uc max. and oscillating frequency limited to 400 Hz max.
■ Slight increase in drop-out time (1.2 to 2 times the normal time).

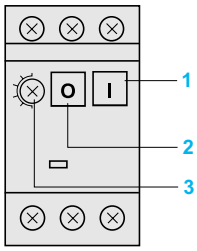
Protection components
Thermal-magnetic motor circuit-breakers
GZ1 E

Presentation



GZ1 E motor circuit-breakers are 3-pole thermal-magnetic circuit-breakers specifically designed for the control and protection of motors, conforming to standards IEC 60947-2 and IEC 60947-4-1.

Connection
These circuit-breakers are designed for connection by screw clamp terminals. This technique ensures secure, permanent and durable clamping that is resistant to harsh environments, vibration and impact and is even more effective when conductors without cable ends are used. Each connection can take two independent conductors.

Pushbutton control.
Energisation is controlled manually by operating the Start button “I” 1.
De-energisation is controlled manually by operating the Stop button “O” 2, or automatically by the thermal-magnetic protection elements or by a voltage trip attachment.

Protection of motors and personnel
Motor protection is provided by the thermal-magnetic protection elements incorporated in the motor circuit-breaker.
The magnetic elements (short-circuit protection) have a non-adjustable tripping threshold, which is equal to about 13 times the maximum setting current of the thermal trips.
The thermal elements (overload protection) include automatic compensation for ambient temperature variations.
The rated operational current of the motor is displayed by means of a graduated knob 3.
Personnel protection is also provided. All live parts are protected against direct finger contact.
GZ1 E motor circuit-breakers are easily installed in any confi guration thanks to their universal fi xing arrangement: screw fi xing or clip-on mounting on symmetrical, asymmetrical or combination rails.

Protection components
Thermal-magnetic motor circuit-breakers GZ1 E

Enclosures for thermal-magnetic circuit-breakers GZ1 E

Type	Degree of protection	Reference	Weight kg
Surface mounting, double insulated, with protective earth Sealable cover	IP 41	**GV2 MC01**	0.290
	IP 55	**GV2 MC02**	0.300
Flush mounting, with protective earth	IP 41 (front face)	**GV2 MP01**	0.115
	IP 55 (front face)	**GV2 MP02**	0.130

Front plate

Description	Degree of protection	Sold in lots of	Unit reference	Weight kg
For direct control, through a panel, of a chassis mounted GZ1 E	IP 55	1	**GV2 CP21**	0.800

Accessories common to all enclosures (to be ordered separately)

Padlocking device (1) **for GZ1 E operator** (padlocking is only possible in the “O” position)	1 to 3 padlocks Ø 4 to 8 mm	1	**GV2 V01**	0.075
Mushroom head “Stop” pushbutton, Ø 40 mm, red	Spring return (1)	1	**GV2 K011**	0.052
Sealing kit	For enclosures and front plate IP 55	10	**GV2 E01**	0.012
Neutral terminal		100	**AB1 VV635UBL**	0.015
Partition		50	**AB1 AC6BL**	0.003

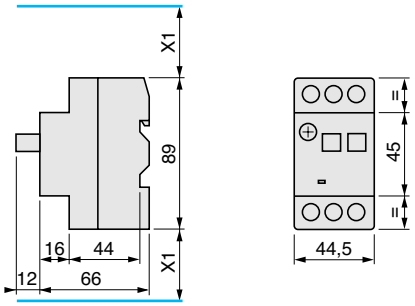
Description	Voltage V	Colour	Sold in lots of	Unit reference	Weight kg
Pilot light with neon bulb	380/440	Green	10	**GV2 SN33**	0.019
		Red	10	**GV2 SN34**	0.019
		Orange	10	**GV2 SN35**	0.019
		Clear	10	**GV2 SN37**	0.019

(1) Supplied with IP 55 sealing kit. To be fitted with enclosures **GV2 M●01**.

Protection components
Thermal-magnetic motor circuit-breakers
GZ1 E

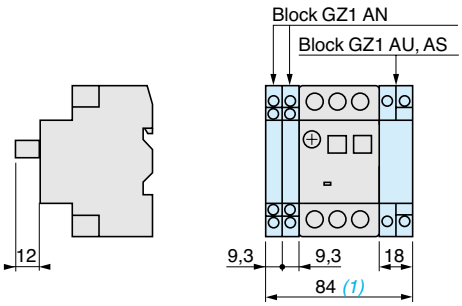
Dimensions

GZ1 E



X1: electrical clearance = 40 mm for Ue y 690 V.

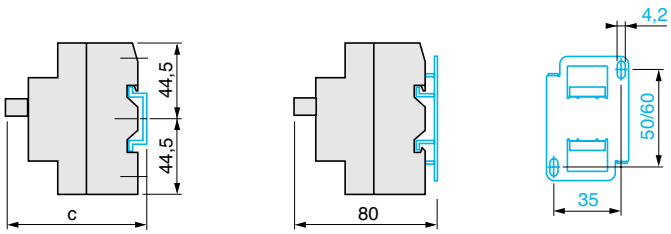
GZ1 AN, GZ1 AU, GZ1 AS



(1) max.

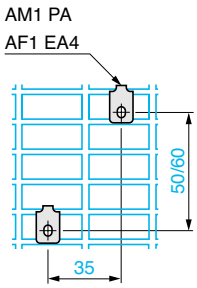
Mounting

GZ1 E on 35 mm ⩽ rail

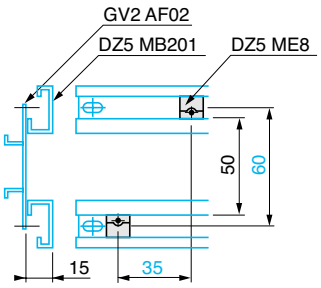


c = 78.5 on AM1 DP200 (35 x 7.5).
c = 86 on AM1 DE200 and AM1 ED200 (35 x 15).

GZ1 E on pre-slotted mounting plate



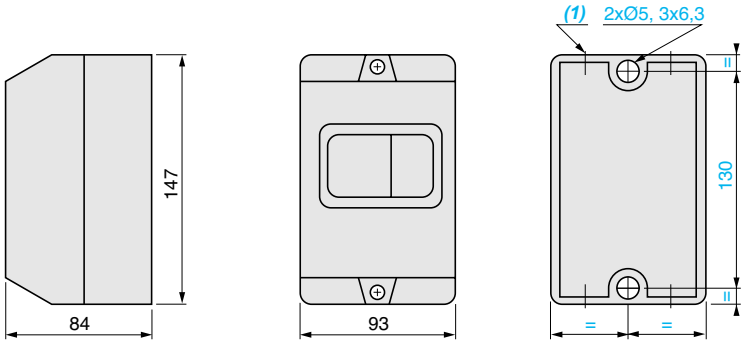
GZ1 E on rails DZ5 MB201, DZ5 ME8 or GV2 AF02



Protection components
Thermal-magnetic motor circuit-breakers
GZ1 E, in enclosure

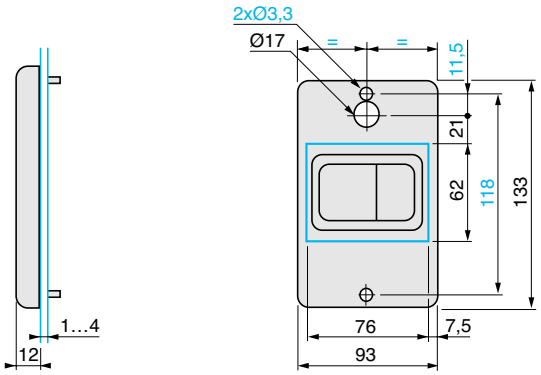
Dimensions

Surface mounting enclosure GV2 MC0●

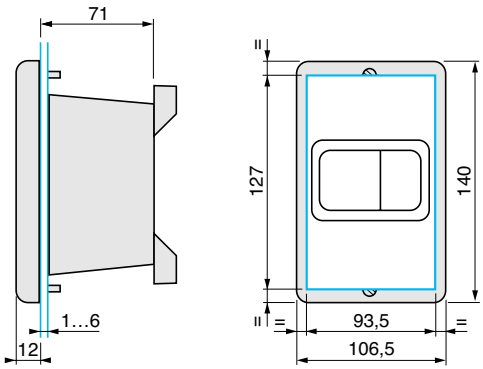


(1) 4 knock-outs for 16 mm plastic cable gland or 16 mm conduit.

Front plate GV2 CP21



Flush mounting enclosures GV2 MP01 and GV2 MP02



Coordination between protection & control components

Coordination: safety and faster restart after a short circuit

This benefit is obtained by choosing contactors with Schneider Electric guaranteed coordination.

What exactly is coordination?

A contactor is said to be "coordinated" with the upstream protection device when its behaviour is controlled in the event of a short circuit. This behaviour of Type 1 coordination can be:

> Guaranteed not to pose a danger to the workforce and not to damage the installation. It is accepted that the contactor should be destroyed or repaired.

Compliance tests

Only the very stringent certified tests performed by Schneider Electric can guarantee the behaviour described by IEC 60947-4-1.

EasyPact TVS LC1E06 to 630

Glossary

Altitude	The rarefied atmosphere at high altitude reduces the dielectric strength of the air and hence the rated operational voltage of the contactor. It also reduces the cooling effect of the air and hence the rated operational current of the contactor (unless the temperature drops at the same time). No derating is necessary up to 3000 m. Derating factors to be applied above this for main pole operational voltage and current (a.c.supply) are as follows:

Altitude	3500m	4000m	4500m	5000m
Rated operational voltage	0.90	0.80	0.70	0.60
Rated operational current	0.92	0.90	0.88	0.86

Ambient air temperature	The temperature of the air surrounding the device, measured near to the device. The operating characteristics are given: ■ with no restriction for temperatures between -5 and +55 °C ■ with restrictions, if necessary, for temperatures between -20 and +70 °C. Please consult your local Schneider Electric office.
Rated operational current (Ie)	This is defined taking into account the rated operational voltage, operating rate, ulilisation category and ambient temperature around the device.
Conventional thermal current (Ith) (1)	The current which a closed contactor can sustain for a minimum of 8 hours without its temperature rise exceeding the limits given in the standards.
Permissible short-time rating	The current which a closed contactor can for a short time after a period of no load, without dangerous overheating.
Rated operational voltage (Ue)	This is the voltage value which, in conjunction with the rated operational current, determines the use of the contactor or starter, and on which the corresponding tests and the utilisation category are based. For 3-phase circuits, it is expressed as the voltage between phases.
Rated control circuit voltage (Uc)	The rated value of the control circuit voltage, on which the operating characteristics are based. For a.c. applications, the values are given for a sinusoidal wave form (less than 5% total harmonic distortion).
Rated insulation voltage (Ui)	This is the voltage value used to define the insulation characteristics of a device and referred to in dielectric tests determining leakage paths. As the specifications are not identical for all standards, the rated value given for each of them is not necessarily the same.
Rated impulse withstand voltage (Uimp)	The peak value of a voltage surge which the device is able to withstand without breaking down.
Rated operational power (expressed in kW)	The rated power of the standard motor which can be switched by the contactor, at the rated operational voltage.
Rated breaking capacity (2)	This is the current value which the contactor can break in accordance with the breaking conditions specified in the IEC standard.
Rated making capacity (2)	This is the current value which the contactor can make in accordance with the making conditions specified in the IEC standard.
On-load factor (m)	This is the ratio between the time the current flows (t) and the duration of the cycle (T).  m=t/T Cycle duration: duration of current flow + time at zero current.
Pole impedance	The impedance of one pole is the sum of the impedance of all the circuit components between the input terminal and the output terminal. The impedance comprises a resistive component (R) and an inductive component ($X = L\omega$). The total impedance therefore depends on the frequency and is normally given for 50 Hz. This average value is given for the pole at its rated operational current.
Electrical durability	This is the average number of on-load operating cycles which the main pole contacts can perform without maintance. The electrical durability depends on the utilisation category, the rated operational current and the rated operational voltage.
Mechanical durability	This is the average number of no-load operating cycles (i.e. with zero current flow through the main pole) which the contactor can perform without mechanical failure.

(1) Conventional thermal current, in free air, conforming to IEC standards.
(2) For a.c. applications, the breaking and making capacities are expressed by rms value of the symmetrical component of the short-circuit current. Taking into account the maximum asymmetry which may exist in the circuit, the contacts therefore have to withstand a peak asymmetrical current which may be twice the rms symetrical component.

***Note:** these definitions are extracted from standard IEC 60947-1.*

Definitions

Contactor utilisation categories conforming to IEC 60947-4

The standard utilisation categories define the current values which the contactor must be able to make or break.
These values depend on:
■ the type of load being switched: squirrel cage or slip ring motor, resistors
■ the conditions under which making or breaking takes place: motor stalled, starting or running, reversing, plugging.

a.c. applications
■ **Category AC-1**:
This category applies to all types of a.c. load with a power factor equal to or greater than 0.95.
Examples: heating, lighting, distribution.
■ **Category AC-3**:
This category applies to squirrel cage motors with breaking during normal running of the motor. On closing, the contactor makes the starting current, which is about 7 times the rated current of the motor.
On opening, it breaks the rated current drawn by the motor; at this point, the voltage at the contactor terminals is about 20 % of the mains supply voltage. Breaking is light. For example: all standard squirrel cage motors: lifts, escalators, conveyor belts, bucket elevators, compressors, pumps, mixers, air condition units, etc...
■ **Category AC-4**:
The contactor closes at a current peak which may be as high as 5 or 7 times the rated motor current. On opening it breaks this same current at a voltage which is higher, the lower the motor speed. This voltage can be the same as the mains voltage. Breaking is severe.
This category covers applications with plugging and inching of squirrel cage and slip ring motors.
For example: printing machines, wire drawing machines, cranes and hoists, metallurgy industry.

Note: *These values are given as a guide. They may vary depending on the type of motor, its polarity and the manufacturer.*

Technical information
Product standards and certifications

Standardisation

Conformity to standards

Schneider Electric products satisfy, in the majority of cases, European (for example: CENELEC) or international (IEC) standards. These product standards precisely define the performance of the designated products (such as IEC 60947 for low voltage equipment).
When used correctly, as designated by the manufacturer and in accordance with regulations and correct practices, these products will allow users to build equipment, machine systems or installations that conform to their appropriate standards (for example: IEC 60204-1, relating to electrical equipment used on industrial machines).
Schneider Electric is able to provide proof of conformity of its production to the standards it has chosen to comply with, through its quality assurance system.
On request, and depending on the situation, Schneider Electric can provide the following:
■ a declaration of conformity
■ a certificate of conformity
■ a homologation certificate or approval, in the countries where this procedure is required or for particular specifications, such as those existing in the merchant navy.

Code	Certification authority		Country
	Name	Abbreviation	
EAC	Eurasian Conformity	EAC	Russia
IEC	International Electrotechnical Commission	IEC	Worldwide

Regulations

European Directives

Opening up of European markets assumes harmonisation of the regulations pertaining to each of the member countries of the European Union.
The purpose of the European Directive is to eliminate obstacles hindering the free circulation of goods within the European Union, and it must be applied in all member countries. Member countries are obliged to transcribe each Directive into their national legislation and to simultaneously withdraw any contradictory regulations.
The Directives, in particular those of a technical nature which concern us, only establish the objectives to be achieved, referred to as “essential requirements”.
The manufacturer must take all the necessary measures to ensure that his products conform to the requirements of each Directive applicable to his production.
As a general rule, the manufacturer certifies conformity to the essential requirements of the Directive(s) for his product by affixing the CE marking.
The CE marking is affixed to Schneider Electric brand products concerned, in order to comply with French and European regulations.

Significance of the CE marking

■ The CE marking affixed to a product signifies that the manufacturer certifies that the product conforms to the relevant European Directive(s) which concern it; this condition must be met to allow free distribution and circulation within the countries of the European Union of any product subject to one or more of the E.U. Directives.
■ The CE marking is intended solely for national market control authorities.
■ The CE marking must not be confused with a conformity marking.

European Directives (continued)

For electrical equipment, only conformity to standards signifies that the product is suitable for its designated function, and only the guarantee of an established manufacturer can provide a high level of quality assurance.
For Schneider Electric brand products, one or several Directives are likely to be applicable, depending on the product, and in particular:
■ the Low Voltage Directive 2014/35/EU: the CE marking relating to this Directive has been compulsory since 16th January 2007.
■ the Electromagnetic Compatibility Directive 2014/30/EU.

Note

For further details on a specific product, please refer to the "Characteristics" pages in this catalogue or consult your Regional Sales Office.
